The New York Times : Cyberattack! Sony Pictures Invaded before purchasing it in order to gauge whether or not it would be worth my time, and all praised Cyberattack! Sony Pictures Invaded:

In late November 2014, Sony Pictures unwittingly found itself at the center of a real-life spy caper when its computer systems were hacked by a group calling itself the "Guardians of Peace." There was immediate speculation that North Korea was behind the attack, a payback for Sony's new movie "The Interview," a black comedy that featured a plot to assassinate North Korea's leader, Kim Jong-un. The attack soon became an international incident, with President Obama threatening retaliation against North Korea and the F.B.I. launching an investigation. Fearing reprisals, Sony canceled the movie's release and was widely criticized (it later

offered a limited run). Perhaps even more devastating for the studio was the exposure of embarrassing emails about some of the world's biggest movie stars, revealing details about contracts and gender-based salary inequities. This Tbook, a selection of articles from The New York Times, chronicles the fallout of the Sony hacking — one of the most damaging cyberattacks in recent history.
