Wanda Tseng, David Cowen : India's and China's Recent Experience with Reform and Growth (Procyclicality of Financial Systems in Asia) before purchasing it in order to gauge whether or not it would be worth my time, and all praised India's and China's Recent Experience with Reform and Growth (Procyclicality of Financial Systems in Asia):

China and India already rank among the world's largest economies, and each is moving rapidly toward the center stage of the global economy. In this process, different priorities have been placed on economic reforms over the past two decades? China taking a more outward strategy and India, until recently, a more inward one. Can they continue to rank among the fastest-expanding economies? This volume addresses that issue, highlighting what has worked and what

more needs to be done to ensure sustained rapid economic growth and poverty reduction. Addressing the two countries' recent experiences with growth and reform, this book provides important insights for other developing economies.
