Not only is it a boring read, but I feel like every 3 words the author used a thesaurus to try and use big, smart words, which really just makes it incredibly arduous to read.0 of 0 people found the following review helpful. It is often assumed that the impact and implementation of ICT's (Information and Communication Technologies) will or should be the same in all situations with little regard to the particular social or cultural context. Drawing on experience and research in different societies (Europe, Latin America, etc.), this book explains the nature of organizational diversity in which ICT innovation takes place, and also develops a conceptual approach to account for it. The book draws from institutionalist concepts of organizations, the sociology of technology, current debates on globalization and critiques of the rationality of modernity. The theoretical perspective is supported empirically by four international case studies. The author shows how the processes of ICT innovation and organizational change reflect local aspirations, concerns, and action, as well as the multiple institutional influences of globalization.
