RecommendedBy Ernesto Pentilde;aA very good guide to learn TOGAF and to apply it.0 of 0 people found the following review helpful. Perfect condition,By Colbert HuntingtonSuper fast shipping! I am satisfying with its quacity. This is an Easter present for my kids. i received it on time and my kids said it is fantastic. wonderful product well made and pratical size is also just right

Modeling Enterprise Architecture with TOGAF explains everything you need to know to effectively model enterprise architecture with The Open Group Architecture Framework (TOGAF), the leading EA standard. This solution-focused reference presents key techniques and illustrative examples to help you model enterprise architecture. This book describes the TOGAF standard and its structure, from the architecture transformation method to governance, and presents enterprise architecture modeling practices with plenty of examples of TOGAF deliverables in the context of a case study. Although widespread and growing quickly, enterprise architecture is delicate to manage across all its dimensions. Focusing on the architecture transformation method, TOGAF provides a wide framework, which covers the repository, governance, and a set of recognized best practices. The examples featured in this book were realized using the open source Modelio tool, which includes extensions for TOGAF. Includes intuitive summaries of the complex TOGAF standard to let you effectively model enterprise architecture Uses practical examples to illustrate ways to adapt TOGAF to the needs of your enterprise Provides model examples with Modelio, a free modeling tool, letting you exercise TOGAF modeling immediately using a dedicated tool Combines existing modeling standards with TOGAF

"The authors have done a great job of producing a document of excellent quality, structure, and content in the complex field of EA... This book is of significant importance to the whole EA community, including but not limited to EA experts and beginners." --Computing sAbout the Author Philippe Desfray is the Co-founder of and Vice President of RD at Softeam. Internationally renowned expert and author of several books on modeling, Philippe is a contributing member of the OMG, where he participates in the elaboration of a number of standards, notably UML and BPMN. He has been involved in model driven development research, standardization, and tooling for nearly two decades. Gilbert Raymond is a Senior Consultant and head of Softeam's Information System and Methods division. Gilbert is an expert in Information Systems and BPM, and is TOGAF 9-certified.
